# THE NEXT GME OPTION CLEARING CYCLE & BULL RUN

## February 22 - The next GME option clearing cycle & GME bull run

Due Diligence

This is not financial advice. I am not a financial advisor. This is my own research on GME and is how I invest. It's risky and may not be suited for others.

## In This DD

I'm going to explain why GME goes up & down every few months, when it goes up & why.

I observed, tested, verified & peer reviewed this content with a dozen DD writers from this sub.

#### What you're going to learn in this DD

- 1. The exact dates/weeks where GME goes up
- 2. What happened on January 28
- 3. What happened on February 24

\_\_\_\_\_

## Solid Evidence of Predictable Cycles

I solidified my findings during the August GME cycle and verified that it's truly possible to know when GME will do it's usual runup.

#### I have 2 pieces of evidence

- August Run Predicted 2 days before it happened
- November Run Predicted 1 week before it happened

It's not magic nor shooting in the dark hoping to hit the correct dates. You too can "predict" when GME will do it's bull run next.

#### Next Month's Run

• February Run - 1 Month Before it Happened

*I reiterate that it's not magic and that you can figure these dates out yourself. One CANNOT edit the above links once they're posted. They are permanent.* 

\_\_\_\_\_

[Let's go | Section #1]

## Finding a GME Cycle/Runup - The Mega TLDR

It's so easy it's dumb that it's so easy to figure out. I'm going to spoon feed you how to know the exact date of every future GME cycle/runup/green candle in this section.

#### Which months

- 1. February
- 2. May
- 3. August
- 4. November

#### Which days

- 1. Runups start around the 3'rd Friday of the months mentioned above.
- 2. The Tuesday that comes right after the 3'rd Friday is usually a mega-run up day.

The rest of the days are usually dull, but not always.

How high or low the price runs depends on how much option volume there is to be cleared & netted. ther factors related to options also affect this.

If the price runs beyond the Tuesday I mentioned, then it means there's been high option volume / I / exercises in the previous month e.g like what happened in Jan & Feb 221.

## [Finding a GME Cycle | Section #2]

## Finding the Month of a GME cycle

So once every month all option trades are cleared. This happens every month & it has a big effect on every stock's price. <u>See ption Clearing</u>.

There are three option cycles that a listed option can be assigned to on the public markets:

- 1. JAJO January, April, July, and October
- 2. FMAN February, May, August, and November
- 3. MJSD March, June, September, and December

These are the months GME's price starts to ramp up. In this current post, the month we're going to run up is February.

## Conclusion

Different stocks clear on different monthly cycles <u>See ption Cycles</u>. What is interesting for you to know & to check is that the vast ma ority of stocks on the FMAN option clearing cycle follow GME's runups.

A very decent amount of these FMAN stocks are speculated to be part of the "meme basket".

## Finding the E ACT Days of a GME runup Cycle

Source https://www.sec.gov/rules/sro/nscc/2 21/34- 2213.pdf

The next GME cycle dates are as follows

- February 16 18
  - Top 3 NSCC Members must deposit money to the NSCC/DTCC for option clearing. The NSCC, DTCC and CC will take care of the rest for them.
- February 18 22
  - NSCC/ CC/DTCC communicate with each other electronically & do option trades verification & some option netting/CNS.
- February 22 March 2
  - Real option netting/CNS & clearing starts happening. sually if there wasn't a lot of options cleared, netting can end as early as by the 23'rd or 24'th & the rest of the days are dull downer dates.

These are the official days where clearing/CNS for options is done & thus T 2 volume is seen for GME. Cleared option volume causes the runup. People start selling covered calls into high I , make big bucks & drive the price down, rinse and repeat.

Ever since i've started doing these write-ups & people have figured this thing out, the early few days of the runup month have started becoming bullish & this has resulted in the option clearing runup to be less bullish.

I'm speculating that my write ups have caused these people to somehow split their risk as to avoid creating additional volatility when it does not suit them. But this paragraph right here is ust tinfoil.

### How/Why do memestonks runup every days

The people who clear options are, well, the NSCC/DTCC. Depository Trust & Clearing Corporation, National Securities Clearing Corporation . The CC ptions Clearing Corporation which is also part of the DTCC umbrella is also part of this loop.

They're all the same company/corporation/umbrella.

#### How it works:

16

- 1. The CC transmits T the NSCC that month's estimated option clearing volume e.g how much people bought, sold, exercised options.
- The NSCC then asks the 3 top largest NSCC participants which are mostly the big banks and some others to give them money vaguely enough to clear / net Really it's called Netting those option trades. Netting is ust a fancy word for doing basic math to bring their books to zero. It ust means 1 Sell - 1 Buy .
- 3. The timeframe in which the top 3 largest NSCC participants have to deposit that money to clear those trades is the **3'rd Friday of every month** & the 2 days preceeding/before it.

#### B. <u>Current Rules Relating to Supplemental Liquidity Deposits</u>

Currently, NSCC only collects supplemental liquidity deposits during monthly

options expiry periods in order to cover the heightened liquidity exposure resulting from

increased trading activity around options expiration.<sup>16</sup> NSCC only collects supplemental

liquidity deposits from its 30 largest Members or group of affiliated Members

(hereinafter, "Providers").<sup>17</sup> NSCC calculates each Provider's supplemental liquidity

obligation for an upcoming options expiry period using an estimate based on NSCC's

highest liquidity need and the Provider's settlement activity during the prior 24-months.<sup>18</sup>

Providers, in turn, must fund their supplemental liquidity obligations two business days

prior to the start of the options expiry period, which NSCC will return seven business days after the end of that period.<sup>19</sup>

See Rule 4(A), supra note 8. NSCC defines the duration of the options expiry periods in its Rules, which typically runs from the third Friday of the month to the following Tuesday. See id.

Sources: Here's the source of the above 3 informationseses.

- <u>https//www.sec.gov/rules/sro/nscc-an/221/34-1.pdf</u>, read page 3, 4, AND the friggin footnotes of those pages.
- SR-NSCC-81 making this SLD clearing DAILY IF Required <u>https//www.dtcc.com/-</u> /media/Files/pdf/221//21/a18.pdf

Whilst SR-NSCC-81 allows "them" to perform options clearing daily if they want to, they seem to be following the old schedule of monthly options clearing except perhaps where i mentioned before on how they might be splitting their risk at the start of the options clearing month & during the old/traditional clearing cycle days.

## So! Thus far

So so far we know that

- 1. The top 3 big bank boys need to give money to the NSCC/DTCC once a month to clear/net the CC's option trades that people buy, sell, exercise, expire worthless etc.
- 2. The effect of this clearing is bullish or bearish depending on the amount of options cleared, the amount exercised, the trade direction long, short, share availability, strike, etc etc.
- 3. If there's money leftover after clearing which there usually is it's returned 2 weeks later.

November's Cycle was interesting because it was the first time the cycle was a bit unruly. There was action both at the start of the month & during the expected cycle dates. I expect them to follow suit & duplicate the November cycle in February. It's in their psychology & how they do things in my opinion and i say this based on past observations.

## Example - What an SLD Cycle Looks Like

#### \*The SLD in SLD cycle means: Supplemental Liquidity Deposit"

Now, let's see what happens to the market during the week leading up to the Friday NSCC deposit deadline. The SLD requirement is MARKET-WIDE and affects ALL stocks/equities and it affects every equity differently.

\_\_\_\_\_

#### SPY (SP500) SLD Cycle Example

Within the red square is the week where in the last 3 days of the week the Top 3 NSCC members which are mostly ALL the big banks need to deposit their Supplemental Liquidity Deposit or SLD with NSCC/DTCC.

Again, the deposit days are always the third Friday of every month and the 2 days before it.

• Dotted Line Wednesday NSCC Deposit line is open

Look at this friggin chart for a bit.

Do you notice that the days preceding the 3'rd Friday every month, the SP index dumps Consistently too It then proceeds to recover on the next Tuesday I don't understand exactly why this happens and can only make assumptions.

The only assumption i can make as to WHY is that by lowering the price or performing some sell-offs, the market and some equities can trade lower & so when it comes to clearing those trades, less money is used from the SLD & the banks save money.

-----

#### GME Example

In this example, you're seeing the day on which the GME dong appears. The progression is Feb 24, May 2 and Aug 23.

Legend:

- 1. Dotted Green Line NSCC SLD Deposit Period Opens
- 2. Bright Fat Green Line 3'rd Friday of the Month / SLD Deposit Deadline
- 3. Second Bright Fat Green Line Tuesday next Week
- 4. Thin Pale Green Line 'th and last to final day of CNS/Netting
- . Red Line Last day of option netting & return of remaining SLD to banks.
- . Yellow Line Futures Roll Date
- . Dotted Yellow Line Futures Expiry

You'll notice that as i previously said that the month where GME moons is ALWAYS the month before the futures roll

month First Yellow Line Roll Date and that it's almost always the Tuesday after the 3'rd Friday of every month every 90 days.

**Some extra information here,** any time between the date that futures will be rolled forward & futures expiry in the next month, GME takes a dump. Incidentally, this is also ALWAYS when GME earnings are scheduled. Make your own conclusion as to why this happens, i have mine.

## Further Breakdown of the NSCC ption SLD Cycle

The NSCC SLD deposit cycle consists of multiple phases and they are as follows in top to bottom order.

- 1. Deposit the SLD Cycle '3rd Friday of every month & the 2 days before
- 2. If this SLD cycle is the one before the swaps and futures roll month, then the first big GME green mega-dongcandle on the chart appears exactly on the following Tuesday. Some rare exceptions apply due to holidays that can shift this day by -1day.
- 3. ptions Netting/CNS period Tuesday AFTER the 3'rd Friday of the month business days that follow
- 4. Returning the remaining unused SLD cash back to sender Point #2 above, but it's the 'th business day after that Tuesday

Let me make it simpler and add pictographs using the next November GME cycle below.

#### 0) Find the 3'rd Friday of the cycle month

|     | 2022 FEBRUARY |     |     |      |     |     |  |  |  |
|-----|---------------|-----|-----|------|-----|-----|--|--|--|

| 27  | <b>28</b><br>Netting Vol<br>Hits GME |     |                               |                               |                                      |     |  |  |  |

|     | 2022 MARCH              |                              |                                      |     |     |     |  |  |  |
|-----|-------------------------|------------------------------|--------------------------------------|-----|-----|-----|--|--|--|
| SUN | MON                     | TUE                          | WED                                  | THU | FRI | SAT |  |  |  |
|     | Netting Vol<br>Hits GME | 1<br>Netting Vol<br>Hits GME | 2<br>Leftover<br>Deposit<br>Returned | 3   | 4   | 5   |  |  |  |
| 6   | 7                       | 8                            | 9                                    | 10  | 11  | 12  |  |  |  |
| 13  | 14                      | 15                           | 16                                   | 17  | 18  | 19  |  |  |  |
| 20  | 21                      | 22                           | 23                                   | 24  | 25  | 26  |  |  |  |
| 27  | 28                      | 29                           | 30                                   | 31  |     |     |  |  |  |

Whatever SLD Deposit remains in the NSCC account after the 'th day is returned to the 3 NSCC largest members/participants. Remember this because this is crucial to understand the 28'th of January Margin Call

## Lets visualize the August GME Cycle SLD Style

This is the anatomy of a GME cycle, specifically the August cycle

- 1. Dotted Green Line NSCC SLD Deposit Period Opens
- 2. Bright Fat Green Line SLD Deposit Deadline
- 3. Second bright Fat Green Line Tuesday next week
- 4. Thin Pale Green Line 6'th and last to final day of CNS/Netting
- . Red Line Last day of CNS & SLD remains returned to banks.
- . Yellow Line Futures Roll Date
- . Dotted Yellow Line Futures Expiry

#### **GME August Cycle Chart**

- Tuesday after the 3'rd Friday of August had the mega green candle.
- This continues until the last couple of days where the SLD is returned to banks.
- Then it's back to shorting the underlying for 8 days until the next day cycle.

## January 28 Explained | Section #3

## isualising the January 28 2 21 SLD Cycle

To clarify,

January was N T part of the quarterly / day / 3 month cycle. January was something else. FEBR ARY was a GME day cycle.

First let's overlay the SLD period on top of the January Calendar & then show it visually on a chart. I bet you will stuff your pants and suddenly everything will make so much sense and all the fud in the world will be dispelled. You're whalecum.

Mentioning the 3 ma or parts of the SLD cycle as a reminder of what they are

- 1. Deposit the SLD Cycle '3rd Friday of every month & the 2 days before
- 2. If this SLD cycle is the one before the swaps and futures roll month, then the first big GME green mega-dongcandle on the chart appears exactly on the following Tuesday. Some rare exceptions apply due to holidays that can shift this day by -1day.
- 3. ptions Netting/CNS period Tuesday AFTER the 3'rd Friday of the month business days that follow
- 4. Returning the remaining unused SLD cash back to sender Point #2 above, but it's the 'th business day after that Tuesday

|     | 2021 JANUARY |     |     |     |            |     |  |  |  |
|-----|--------------|-----|-----|-----|------------|-----|--|--|--|
| SUN | MON          | TUE | WED | THU | FRI        | SAT |  |  |  |
|     |              |     |     |     | 1          | 2   |  |  |  |
|     |              |     |     |     | 1st Friday |     |  |  |  |
| 3   | 4            | 5   | 6   | 7   | 8          | 9   |  |  |  |
|     |              |     |     |     | 2nd Friday |     |  |  |  |
| 10  | 11           | 12  | 13  | 14  | 15         | 16  |  |  |  |
|     |              |     |     |     | 3rd Friday |     |  |  |  |
| 17  | 18           | 19  | 20  | 21  | 22         | 23  |  |  |  |
| 24  | 25           | 26  | 27  | 28  | 29         | 30  |  |  |  |
| 31  |              |     |     |     |            |     |  |  |  |

#### 0) 3'rd Friday of the Mon

|     | 2021 JANUARY |     |                                    |     |                                  |     |  |  |  |
|-----|--------------|-----|------------------------------------|-----|----------------------------------|-----|--|--|--|
| SUN | MON          | TUE | WED                                | THU | FRI                              | SAT |  |  |  |

#### 2) Netting / CNS Period

| 2021 JANUARY |                             |   |                             |                             |                             |     |  |  |
|--------------|-----------------------------|---|-----------------------------|-----------------------------|-----------------------------|-----|--|--|
| SUN          | MON                         | TUE   | WED                         | THU                         | FRI<br>1                    | SAT |  |  |
| 3            | 4                           | 5   | 6                           | 7                           | 8                           | 9   |  |  |
| 10           | 11                          | 12  | 13                          | 14                          | 15                          | 16  |  |  |
| 17           | 18                          | 19<br>Normally this<br>is the Green<br>Dong Day | <b>20</b><br>1st CNS<br>Day | <b>21</b><br>2nd CNS<br>Day | <b>22</b><br>3rd CNS<br>Day | 23  |  |  |
| 24           | <b>25</b><br>4th CNS<br>Day | <b>26</b><br>5th CNS<br>Day                     | <b>27</b><br>6th CNS<br>Day | 28                          | 29                          | 30  |  |  |
| 31           |                             |   |                             |                             |                             |     |  |  |

The Monday before the green day was actually a bank holiday where no CNS happens according to the DTCC's documentation. Go figure.

Here's an actual chart with all the above mapped on it. If you understood everything so far, this chart will suddenly make a lot of sense to you.

And again, this is all ust market mechanics. Whether the people who restricted trading truly understood this stuff is debatable lol. Notice January 28, the day where trading got restricted and how it's the **SLD Return Day**.

| 2021 JANUARY |     |     |     |                                |     |     |  |
|--------------|-----|-----|-----|--------------------------------|-----|-----|--|
| SUN          | MON | TUE | WED | THU                            | FRI | SAT |  |
|              |     |     |     |                                | 1   | 2   |  |
| 3            | 4   | 5   | 6   | 7                              | 8   | 9   |  |
| 10           | 11  | 12  | 13  | 14                             | 15  | 16  |  |
| 17           | 18  | 19  | 20  | 21                             | 22  | 23  |  |
| 24           | 25  | 26  | 27  | <b>28</b><br>SLD Return<br>Day | 29  | 30  |  |
| 31           |     |     |     |                                |     |     |  |

Also the day trading was halted. I wonder why :)

## 28'th of January, the SLD Return Day

January 28 is the SLD return date. So what happens on the SLD return day where the SLD/Deposit gets returned to the top 3 largest NSCC members e.g mostly big banks is that the DTCC automatically looks at the their CNS Continuous Netting System that's been running for the past - days and looks at the account balance.

- Looks at account balance
- h no, it's negative
- Panik

The thing is that the CNS system of the DTCC HAS to clear/net these option trades. It's their ob. They clear trades and credit/debit each DTCC/NSCC member's account with the DTCC/NSCC. Whether this account has enough money or not, it'll still go negative & the bank counterparty has to pay up any negatives.

Do you remember when i told you how the CC has to communicate T the DTCC/NSCC the size of this month's option trades that are clearing The amount of trades communicated is communicated only once and that's at the start of the SLD deposit period.

## The CC-to-NSCC option trades amount is an estimate

So the DTCC/NSCC will net everything and IF the CC has miscalculated that month's expected average option trading volume and / or communicated the wrong numbers to the NSCC, the NSCC has ust told all the banks to give them less money than they need to clear this month's option trades, but they don't know this yet.

When the CC communicates this data to the DTCC/NSCC, the DTCC automatically ust knows that THIS is what the NSCC top 3 largest members need to pay for that month. All amounts are for the most part automatically sent/received/requested via Fed-Ach & Fed-Wire systems.

#### The juicy part that explains January & January 28

- In January, GME was being pushed on another subreddit i cannot mention here
- This certain subreddit full of degeneratesmyself included are degenerates that gamble by buying TM days to expiry risky options.
- January WAS a Gamma Squeze Into a Short Squeze. This is FACT. Everyone knows this. The gamma squeze was induced by retail & that certain other reddit yolos money on FDs, people who had bought GME shares & options from before & during the squeze.

We've established that GME's January runup was a combination of a Gamma Squeze into a Short Squeze & people yoloing money on short and long term options which further exacerbates the effect of GME volatility & the SLD required to clear all those trades.

## **Speculative Conclusion**

January 28, the NSCC member that handles Robinhood's clearing money/SLD stuff got contacted by the DTCC/NSCC either Automatically via Fed-Ach as is how these things work R / AND there was a call between them to communicate that the CNS clearing that happened from 1-2 Jan was complete and the regular provided monthly SLD was NT enough to clear their stuffy trades.

To be margin called, you need to have posted margin to begin with. What the NSCC did to RH's bank was NT a margin call. It was a request for an additional Supplemental Liquidity Deposit either automatically via FED-ACH or other communication method.

Note multiple things here

- 1. The DTCC man in congress said there were N margin calls on that day.
- 2. That is true, because this thing is characterized as a Supplementary Liquidity Deposit.
- 3. It's not clearly classified as Margin.

And that's why the DTCC mandid not lie to congress.

RH's sponsoring DTCC/NSCC member communicated to RH that THEY are "margin calling" them for 3 billion because the DTCC/NSCC requested more margin from RH's bank / DTCC/NSCC member and not directly to RH themselves.

The NSCC/DTCC does not talk to sponsored members like RH directly. They talk directly to the bank that is sponsoring the lesser non brokers like RH since that main bank who IS a member of the NSCC/DTCC is the one sponsoring RH to have the same NSCC/DTCC membership as the main bank.

Basically they're lending out their NSCC/DTCC membership to RH. This means that the member who will get the request for more SLD is the bank and N T RH themselves. The BAN will then ask RH for the extra SLD of 3 Billion

## **Clarification & Reminder**

I said before somewhere in this DD that it's the CC / ptions Clearing Corporation that communicates that month's average expected volume to be cleared to the NSCC.

This is not a 1 accurate number they give to the NSCC, it's a vague estimate based on some averaging formula I'm not aware of. I do know it's an estimate. It sounds a lot like the CC estimated WR NG meaning that their formula on calculating the estimated charge amount is ust totally dogpoo.

In normal circumstances this formula is fine but for the insane conditions that lead up to the January SLD period of a Gamma Squeze into a Short Squeze, you can't use averages to estimate the charge for this.

## Dates when GME's price declines

1) Go to your local CME Group equity bar

- https://www.cmegroup.com/trading/equity-index/rolldates.html
- 2) Find the S Indexes Expiration & Roll Dates

**3)** The week before the roll date all the way to the week AFTER the expiration dates tend to be bearish & is where GME declines the most in this entire day cycle.

### ther users who discovered the cycles

#### u/PWNWTFBBQ

n top of all this, I would like to point out to everyone that <u>u/PWNWTFBBQ</u> figured the same thing out When each GME cycle will occur within a day/days of myself but by reverse engineering it using **pure math** without knowing anything about market mechanics.

Her DD is named the **"algorithm has been doing this stuff for years".** It might be hard to follow, but it's all there. She also figured out how the dividends were being used to drive the price down, it's all in her DD.

#### u/gherkinit

The Gherkin! He seems to be quite aware of the cycles but also in a slightly different way than myself & PWNWTFBBQ. In addition to the regular cycles, he talks about the GME ETF Leap expiries & GME Leap Expiries that occur in December and January and how these could be big price drivers.

It's best you check out his posts & DD for a more clear picture of what he brings to the table.

Here's how i feel scrolling through this sub sometimes...

## Ryan Cohen 🔮

@ryancohen

I've seen that too many people don't like options discussed on this sub, so i'm going to make a full series of non stop DD's talking about options from top to bottom. This is ust one of many DD's i've written. Prepare yourselves.

I won't be participating in the comments section of this post, i've also disabled the ability for anyone to PM me. I'll turn those all back on once this sub has it's head on straight regarding options discussions.

Thanks.

I can neither confirm nor deny whether <u>u/criand</u> is in my basement.
